

The pipeline reproduces published autism estimates first

checked before any definition was compared

range the paper allows
 this pipeline

--- rg = 1: the same genetics

a Against the published values

Autism SNP heritability, $K = 0.012$

paper 0.118 (SE 0.010); here 0.117

Autism and ADHD genetic correlation

paper 0.360, no SE: 0.05 tolerance; here 0.346

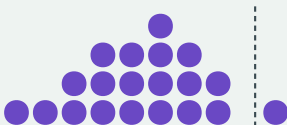

-0.1 -0.05 0 +0.05 +0.1
 this pipeline minus published

b Finnish registry autism and the GWAS

each dot: 1/20 of the estimate's probability

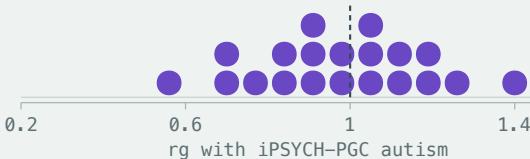

FinnGen autism (F84.0, F84.5), 888 cases

rg 0.73 (SE 0.15)

FinnGen autism spectrum (F84), 1,179 cases

rg 0.98 (SE 0.21)

READING THIS

Heritability 0.117 against 0.118 published;
rg with ADHD 0.346 against 0.360.

FinnGen autism sits 1.8 SE below rg = 1,
autism spectrum 0.1 SE below it.
