

Widening a definition moves the genetics. Changing its source does not.

Shift in genetic correlation when only the FinnGen definition changes, five psychiatric GWAS

■ noise: 1.96 SE of the difference ● $p < 0.05$ ○ not significant ⊙ survives Bonferroni (135 tests)

● autism ● schizophrenia ● bipolar ● depression ● PTSD

Sleep apnoea

add primary care records

CHANGES THE SOURCE

Sleep apnoea

widen to any sleep disorder

CHANGES THE SCOPE

Insomnia

widen F51.0, G47.0 to all of F51

CHANGES THE SCOPE

Constipation

widen K59.0 or laxatives to K59

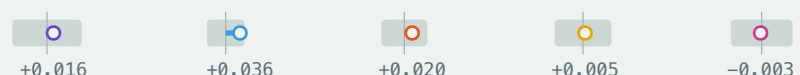

CHANGES THE SCOPE

ADHD

widen F90.0 to all of F90

CHANGES THE SCOPE

Focal epilepsy

exclude anyone also generalized

CHANGES THE RULE

READING THIS

Widening the scope: 18 of 20 shifts are positive, 11 reach $p < 0.05$, 5 survive Bonferroni.

Adding primary care: every shift is 0.013 or smaller; 1 of 5 reach $p < 0.05$, 0 survive Bonferroni.

Tightening the focal epilepsy rule: 0 of 5 shifts reach $p < 0.05$.

Autism: 0 of 6 survive correction.
