

Every definition change in the study, inside its own noise

135 changes of definition for five psychiatric GWAS, and 31 between EHR and clinical depression

READING THIS

Widening the scope: sleep apnoea 11 of 15 escape, insomnia 4 of 5, constipation 2 of 5; ADHD 0 of 5. Epilepsy: focal against generalized 13 of 45; strict or mode against plain 1 of 30. EHR against clinical depression: 6 of 31; the two GWAS share almost no people, so sleeves stay wide.
